## Transforming how the world is nourished

To do what's right for the future of our planet, we're always looking for innovative ways to work with our growers to improve water conservation and regenerative agriculture practices, lower fertilizer usage, kickstart reduced-energy initiatives and optimize fuel usage.

We're continuously seeking opportunities to help position you for success and are **leading the way** with investments in plant-based grains, like quinoa and pulses—and with our recent asset acquisition of Hinrichs Trading Company, which operates across five locations and has more than 30 years of chickpea processing experience.

> Hinrichs Trading Company. The newest member of the Ardent Mills family.

### Chickpea. **An agricultural** wonder.

Chickpeas are a nitrogen-fixing crop that can play a key role in regenerative agriculture.<sup>1</sup>

For every 1,000 acres of our Colorado quinoa planted, 366 million gallons of water are saved.<sup>2</sup>

## Plant-forward solutions to power your products

#### **Pulses and Beans**

Category	Application	Nutritional Highlights	Typical Protein Content (g/100g)
